5G Built for Business

Breaking barriers in 18 states

All 3 layers are important for UScellular to provide 5G services across our diverse markets - urban to rural. A focus on low band 5G allows faster speeds over longer distances allowing us to reach places our competitors don't go.

Our focus is, as always, RURAL connectivity.

In June 2021, UScellular and network partners Qualcomm and Nokia made a significant breakthrough to deliver ultra-fast 5G mmWave coverage spanning a record 10 km with download speeds approaching 1 Gbps to rural communities.
