

# UNHINGED

Dynamic, customizable training environments for military, law enforcement, and fire/rescue. A cutting-edge training system designed by leaders who identified the need for a modern, effective first responder/military training environment. UNHINGED walls can be used with fire hoses and can be set up on uneven ground.

Acquired structures are harder and harder to procure and safely prepare for training exercises. Often it is not operationally feasible to move crews around and accommodate training on the drill grounds. UNHINGED was developed to facilitate training on YOUR terms. We've found that crews are able to conduct extensive training right within their Fire House as it fits their schedules and your training regiment. If you'd prefer to train at your training facility your UNHINGED walls can be used to set up specific drills, or quickly modify your existing training structures. There is no better Fire Department training tool in the Fire Service!

# Proudly made in the U.S.A.

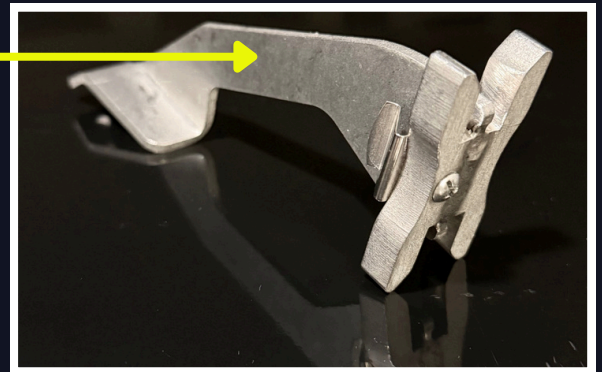

Stainless Steel - All hardware components made of corrosion free stainless steel.

Pultrusion - Fiber reinforced plastic that is lighter than steel, but maintains many of the same characteristics of steel.

Foam Core - Closed cell foam that is waterproof, mold and mildew resistant.

ABS Sheet - UV protected and impact resistant plastic.

HLOX - Unhinged unique locking system. All stainless steel construction, precision cut with CNC water jet.

## SEARCH AND RESCUE

- Configure and quickly re-configure entire structures for search training.
- Utilize windows for victim removal and firefighter rescue.
- Doors and windows can be quickly configured for V.E.S operation.

## HOSE LINE DEPLOYMENT AND MANAGEMENT

- Construct entire floor plans for coordinated fire attack and search evolutions.
- Ability to train line management through homes allowing crews to drill communication and tactics.
- Construct free standing props to conduct training evolutions.

## VISION. BUILD. TRAIN.

- Limited only by your imagination. Modify your current training ground, or bring training to the stations.
- Built to last. Eliminate the need to purchase and build wooden props every year.
- Use for EVOC and driver training. Great for driving exercises such as confined space turnaround and alley-dock parking.
